SUMMARY

2025 B.E. graduate (Electronics & Telecommunication) with hands-on experience building full-stack and backend systems in Python, including a RAG-based knowledge assistant and an LLM evaluation platform with automated quality checks. Comfortable working across APIs, databases, testing, and deployment, with a solid foundation in data structures, algorithms, and OOP. Microsoft Azure AI-900 certified.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML/CSS

Backend & Databases: FastAPI, SQLAlchemy, PostgreSQL, pgvector, Alembic, Redis, arq, JWT & API-Key Auth

Frontend: React, Next.js, TypeScript, Vite

AI / ML: LLM Integration & Evaluation, LLM-as-a-Judge, RAG, NLP, Hugging Face, Sentence Transformers, PyTorch, TensorFlow

Quality Engineering & Observability: Quality Gates, Regression Detection, Prometheus, Grafana, OpenTelemetry, Structured Logging, Rate Limiting

Engineering Practices: Data Structures & Algorithms, OOP, Unit Testing (pytest, 215 tests), CI/CD (GitHub Actions), Docker

Tools & Cloud: Git, GitHub, Postman, VS Code, PyCharm, Microsoft Azure AI Fundamentals (AI-900)

PROJECTS

Independent Projects | Aug 2025 – Present

LLM Evaluation Platform — Quality Gates, Regression Detection & Observability

2025 – 2026

Python, FastAPI, PostgreSQL, Redis/arq, Next.js, Prometheus/Grafana/OpenTelemetry, Docker

- Built a production-oriented LLM/RAG evaluation platform measuring answer quality, hallucination, faithfulness, and retrieval precision/recall, enforcing quality gates and metric-aware regression detection before a change can ship.
- Implemented async batch evaluation via Redis/arq workers, LLM-as-a-judge scoring, and API-key authentication; built a Next.js dashboard, added Prometheus/OpenTelemetry observability, and wrote 215 automated tests.
- Validated a production Docker Compose setup via GitHub Actions CI, with quality gates failing the build on regression (public cloud deployment in progress).

AI Knowledge Assistant — Full-Stack RAG Application

2026

Python, FastAPI, PostgreSQL/pgvector, React, TypeScript, Docker, JWT

- Designed and built a full-stack RAG knowledge assistant end-to-end — FastAPI backend, PostgreSQL with pgvector for semantic search, and a React/TypeScript frontend — enabling users to upload documents and get LLM-powered answers grounded in their own content, with source citations.
- Implemented JWT authentication with Argon2 password hashing and document processing pipelines (PDF, TXT, DOCX); engineered for production readiness with Prometheus metrics, health probes, Alembic migrations, Docker Compose, and CI (deployment in progress).

J.A.R.V.I.S. — Modular AI Automation Assistant

2025

Python, OpenAI API, Tkinter, SpeechRecognition, pyttsx3, cryptography, pystray

- Built a modular Windows AI assistant with GPT-3.5 chat, voice/text interaction, and 18 built-in command categories for apps, system controls, web search, and email.
- Engineered an extensible plugin architecture (importlib, register() interface) separating core routing from independently loadable plugins, with daemon-threaded background operations, thread-safe GUI updates via root.after(), and Fernet-encrypted credential storage (git-ignored key file).

EXPERIENCE

Production Associate

Jun 2026 – Aug 2026

- Collaborated with production and quality teams to identify process issues, support troubleshooting, and analyze data to meet manufacturing targets.
- Prepared production documentation and performed quality inspections, applying analytical and process-improvement skills in a structured, standards-driven environment.

EDUCATION

Shrimati Kashibai Navale College of Engineering

Aug 2021 – May 2025

Bachelor of Engineering in Electronics and Telecommunication — Pune, Maharashtra

MGSK Gujarati High School

2021

Higher Secondary (Science) — 86.66% — Sangli, Maharashtra

CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals (AI-900) — Microsoft, 2024
- Meta / Coursera, 2025: Python Certificate, Back-End Development, Version Control (Git/GitHub)
